Description

The GA/GM series power take-offs (PTO) are a range of clutch shift style PTOs designed for the Allison 1000, 2000, 2400 series transmissions. The PTOs are specifically engineered for use on 2001 and motor 3600 series.

Both models are the same PTO unit, but with a difference in the shifting and mounting kits required. The compact size of the series allows for easy installation, while a remote-mounted solenoid keeps away from heat source to preserve the small size of the device.

The series may be used in various industries, and are suitable for use in dump trucks, wreckers, aerial bucket trucks, tilt back car carriers, and lift gates.
